

Description: Landmark Pro Repeater (R100B)

The R100B Repeater is an industrial grade CD player capable of broadcasting a CD quality looped message. Simply set this unit up to play 24/7 or with a timer and control when your message is played. The R-series is a great addition to any public awareness or advertising campaign and is a creative way to increase customer interest.

Looped Repeaters

Looped repeaters are used to broadcast information and messages endlessly. The R-Series transmitter is coupled with an industrial grade CD player and built in power source. A pre-recorded CD is inserted and automatically played in loop mode so that the targeted audience can tune in and listen to information about a location 24/7 365.

Any location that wants to broadcast a repeating message to visitors can benefit from an R-Series transmitter, whether the message is about store hours or a description of a point of interest as in information interpretation. The R-Series will enhance your existing public information programs and offer a creative alternative for reaching out to casual observers.

As a full service company, Landmark Audio Technologies can provide assistance in all aspects of content preparation and production. From script writing, recording and editing to CD replication, we can offer price competitive, exceptional quality and timely service.
